

## Security Training

The weakest link in your business's cyber security?  
Your employees.

**Cybercrime has gone pro. It's become one of the most significant threats to the security of today's businesses, especially to SMEs.**

Many businesses face financial damage due to cyberattacks targeted at employees. Security Training provides one of the world's most popular integrated Security Awareness Training and Simulated Phishing platforms.

We understand that security is a top priority for your business. Cyberattacks can not only impact your productivity, but more importantly your balance sheet and reputation. Security Training enables your staff to recognise and respond to cyberattacks quickly, so that they can keep security top of mind and help prevent your business from attacks.

- Ongoing security awareness training
- Phishing security testing
- Reporting and user management
- Simulated phishing attacks to find your company's weak link

# Say goodbye to cyber security attacks.

Security Training delivers a comprehensive training platform to better manage the threats of cyber-security.

## Staff education

In many cyberattacks, the first point of entry is associated with employee error. Clicking on falsified attachments or hyperlinks within emails can compromise the security of your company's systems. Security Training provides your employees with the proper training and education to avoid ransomware attacks, saving you from downtime and the loss of thousands of pounds.

## Phish your staff

Security Training significantly reduces staff engagement with phishing attacks. A 12-month case study of 300 Security Training users found the number of phish-prone employees fell from an average of 15.9% to 1.2% within 12 months of training.

The course covers a wide range of methods to combat cybercrime, including simulated phishing attacks, detailed reporting and targeted attacks on under-performing employees.

## Have peace of mind

Cybercrime is growing at the speed of light. From ransomware takeovers to hacking bank accounts, there is no saying who will be next. SMEs are particularly at risk. It's no longer a case of if you'll be attacked – it's when.

Security Training provides your employees with the right training, leaving you with the peace of mind that they won't be your weakest link.

Start phishing your staff for peace of mind.
